

Continuous Oil and Gas facilities Monitoring with AI Super-Resolved Open Satellite Imagery for Cost-Effective Leak Detection

Empowering Global Change with Innovative Technology

*Hichem Mokni, CEO NextAV
Dubai, December 3rd 2023*

Problem

Understanding Methane Emissions

- Methane emissions from oil and gas operations in 2019: **82 million metric tons**.
- Nearly equal distribution between oil and gas sectors.
- Sources include production, processing, transmission, and distribution to end-use consumers.
- **Accidental leaks** (faulty seals, leaking valves...) and **Deliberate releases** (for safety reasons or due to design).

contribution to total energy sector GHG emissions

contribution to global warming since the Industrial Revolution

more heating impact than CO2 in the short term

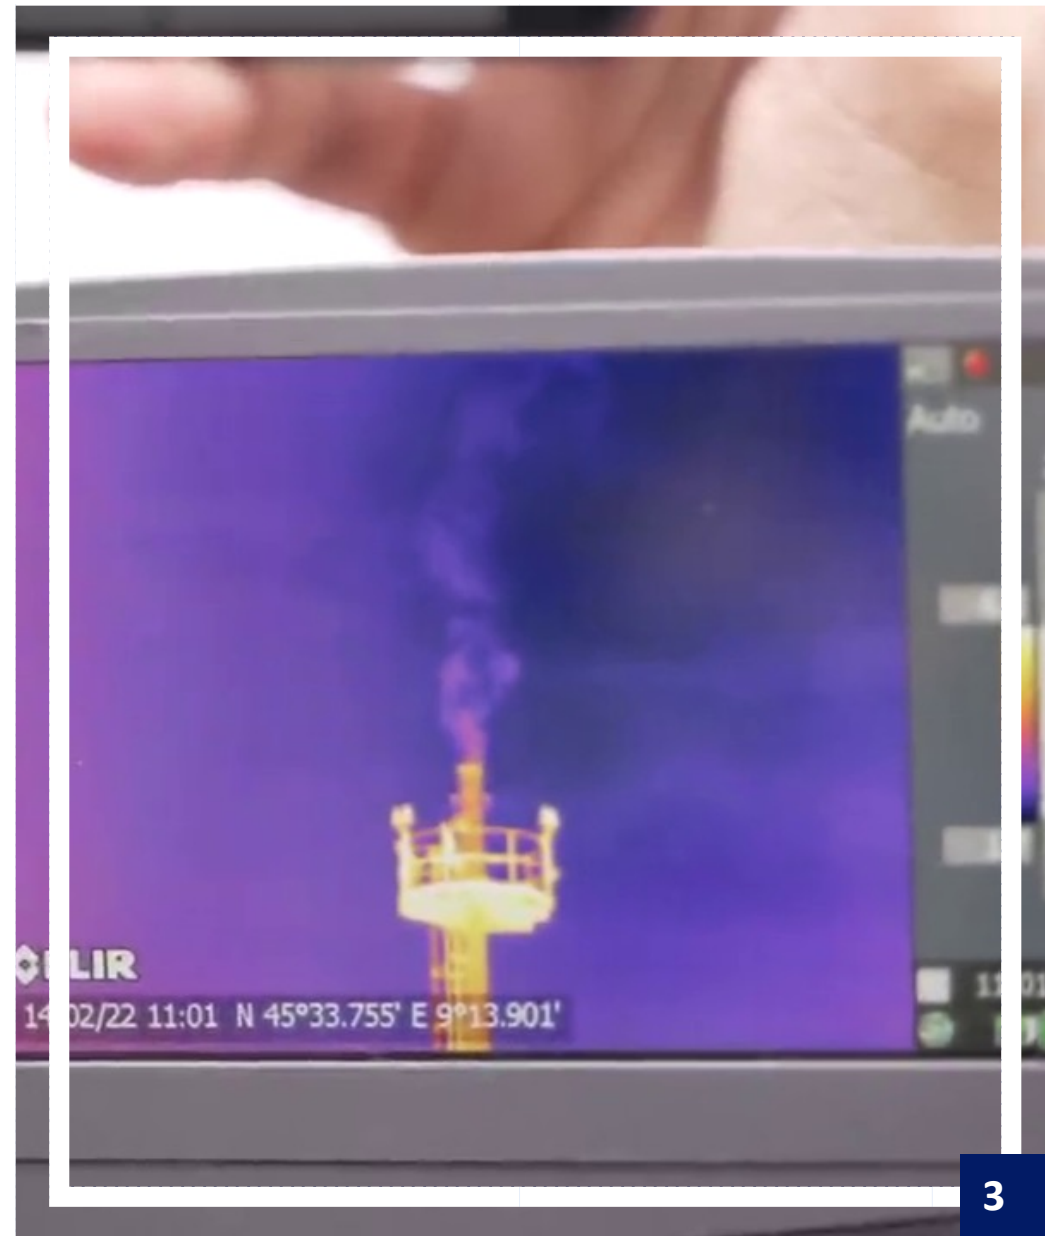

annual losses due to fugitive methane in USA

Problem

Invisible Enemy

Challenges in Detecting Methane Leaks

- **Invisible and odourless**
making leaks difficult to detect using human senses.
- **Typical sensing camera may cost \$100k**
detection technologies are expensive and limited in their coverage, especially in large or remote areas.
- **70% uncertainty about emission reports**
The lack of a comprehensive detection system means many leaks go unnoticed until they cause environmental damage.

From space

Challenges with Satellite imagery

Open Satellite imagery

- Relatively low resolution
- GSD from 10m up to 100m
- 5 days revisit time

Commercial satellite imagery

- High Resolution
- GSD up to 15 cm
- Up to 6 revisit acquisitions per day

SkySat commercial satellite imagery:

- minimum tasking order: \$15,000
- minimum archive order: \$5,000
 - Minimum size :25 sq km

SOLUTION

Super-resolved Satellite Imagery

Based on open available imagery

10 m GSD open
Data

1 m GSD

Subscription Model : Bi-Weekly Satellite Scan Detecting Leaks, Geo Hazards, and Third-Party Interference

| **Big Impact**

Some of the sources can be fixed easily

45% reduction in methane emissions within a decade can prevent a potential 0.3 degrees Celsius increase in global warming

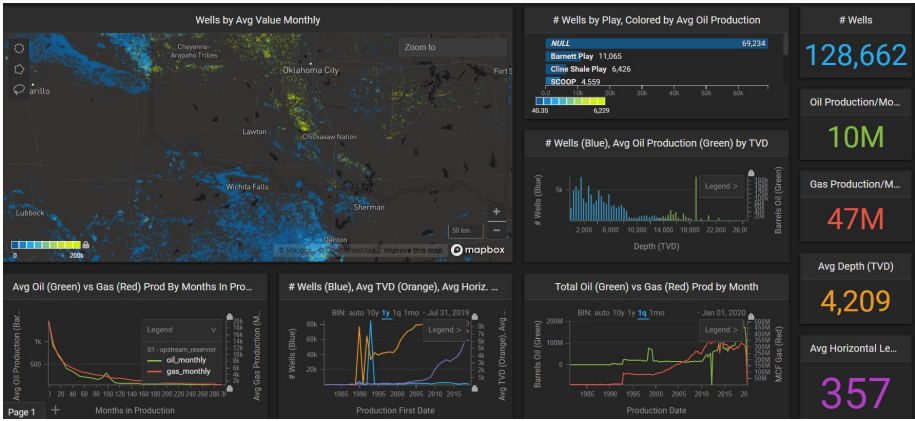

Building on the momentum from COP26, countries are implementing new policies and initiatives to reduce methane emissions across various sectors.

Vision

Multiple Data Sources

GPU accelerated Data Processing for real time Insights

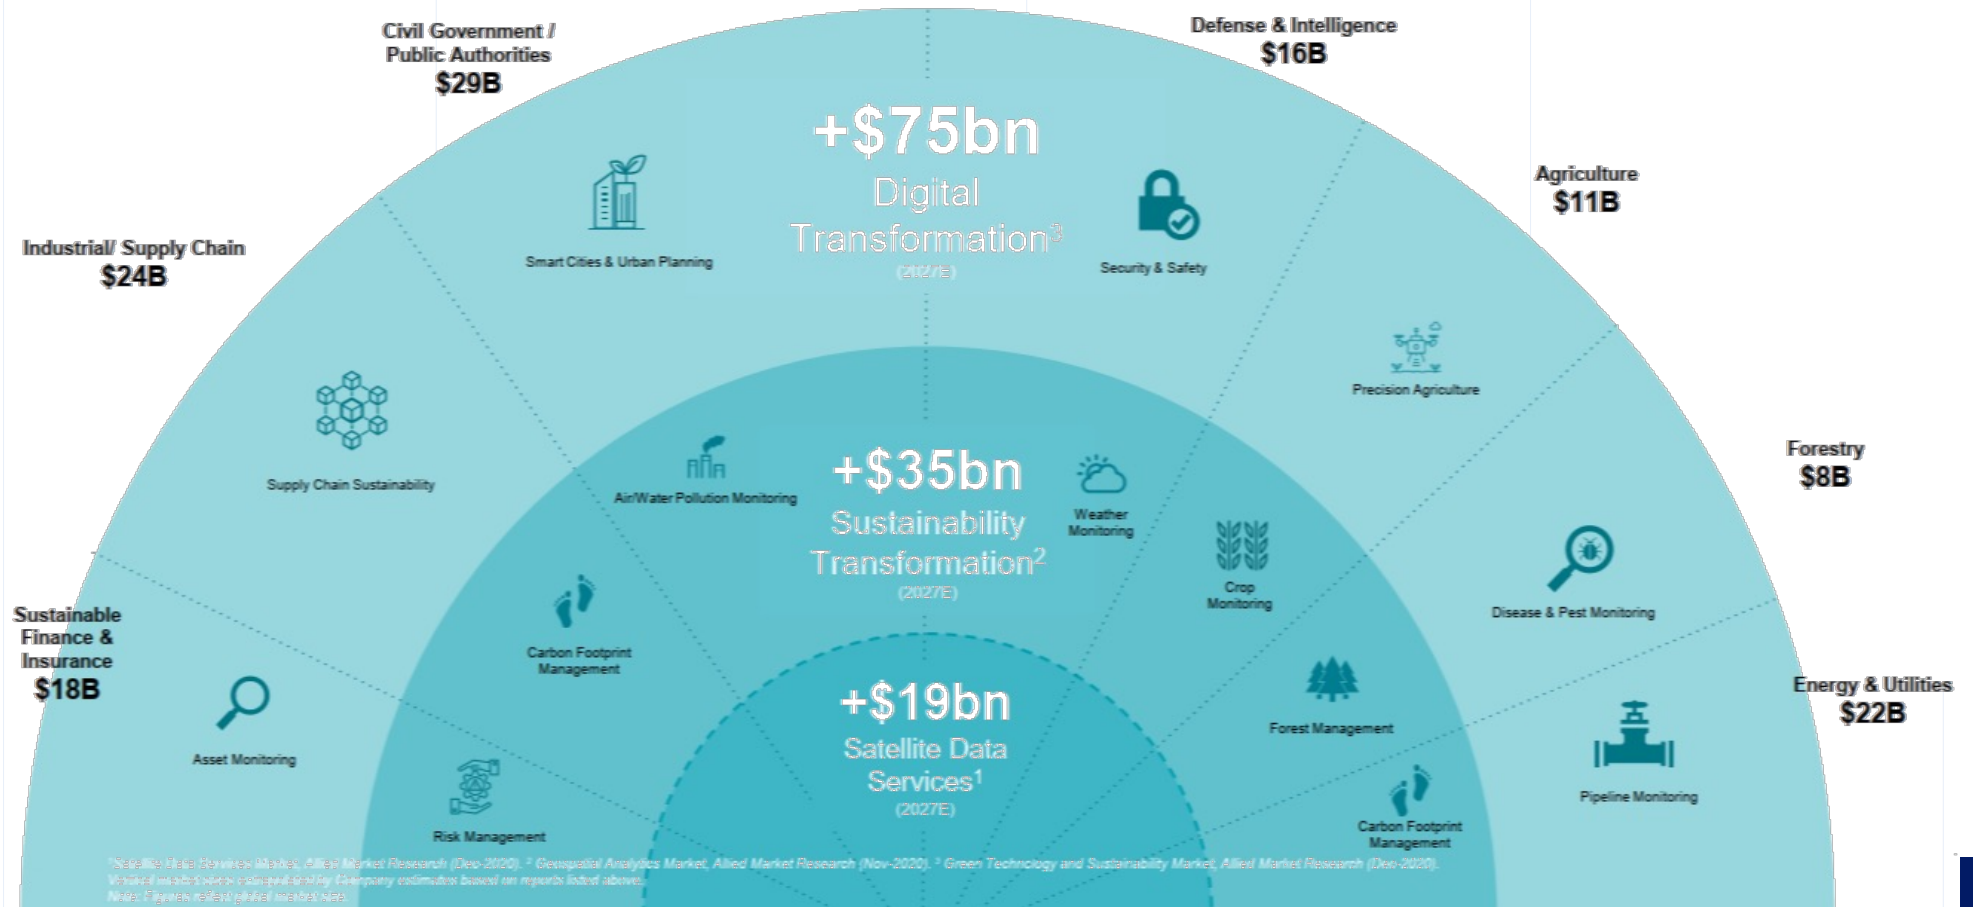

Interactive Dashboard

Up to millions of data samples per second

Forecast for 2027

Market within a Global Economic Shift

¹ Satellite Data Services Market, Allied Market Research (Dec-2020). ² Geospatial Analytics Market, Allied Market Research (Nov-2020). ³ Green Technology and Sustainability Market, Allied Market Research (Dec-2020). Market values are estimates and do not represent a forecast. All figures are in USD unless otherwise specified.

Market penetration
